

HAMMER^{lvc}

High-yielding new registration with a compact crop.

Benefits

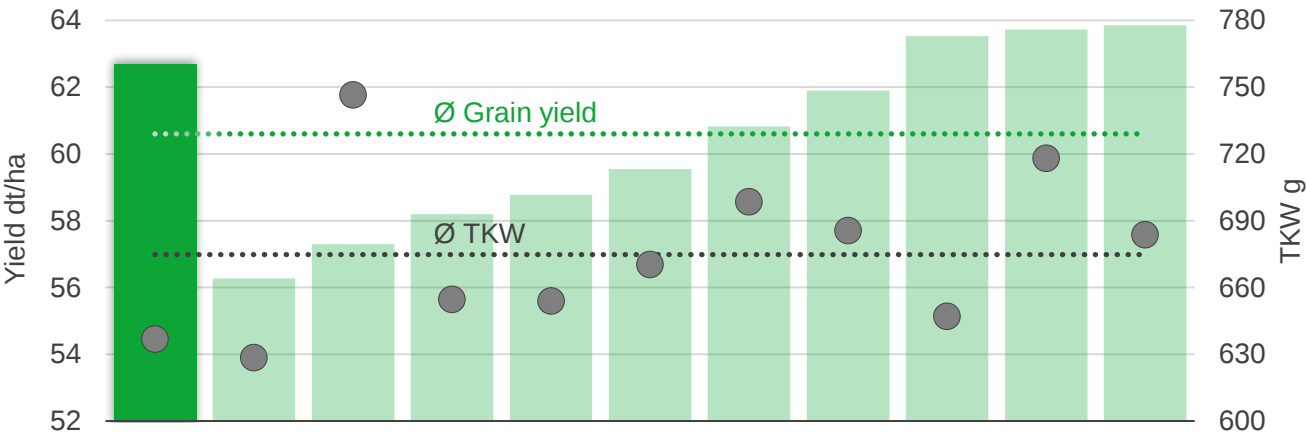

- ✓ Excellent harvestability thanks to shorter plants and low brackling tendency.
- ✓ High grain and protein yield potential.
- ✓ High-performance agronomic package: plant health + shorter growth type.
- ✓ Genetically secured lvc quality for an universal use in animal feed and human consumption.

Classification based on German Federal Plant Variety Office 2024 and own observations.

Profitability – A composition of grain yield and seed input.

With an above-average yield and below-average thousand kernel weight, HAMMER^{lvc} demonstrates a very effective balance between input and output, which is in the interest of farmers.

Source: Official trials Lithuania, 2022 & 2023, 4 locations.
Only varieties shown which were tested for two years at all locations for both traits.
