

# OSTINATO

Harmonious balance of yield and agronomics.

## Benefits

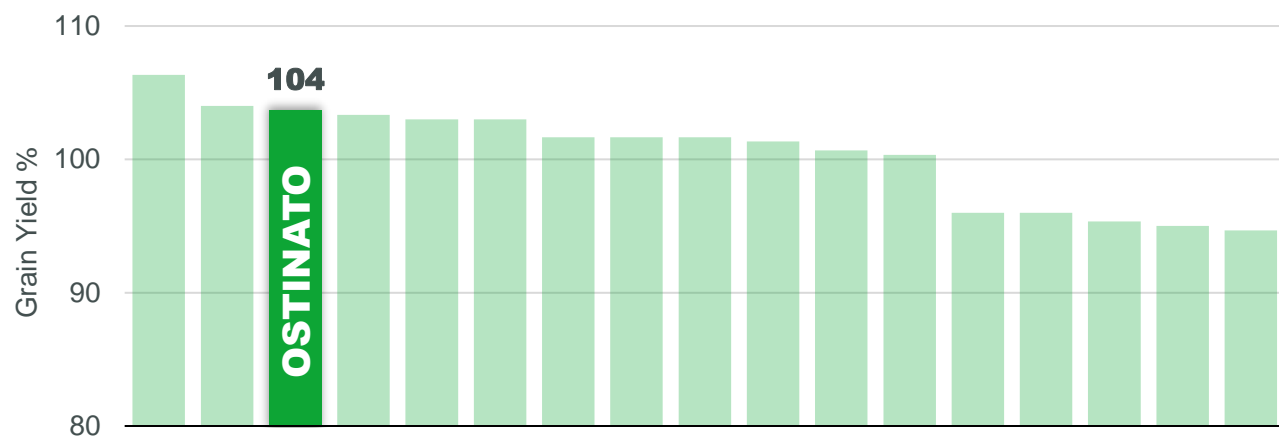

- ✓ Excellent lodging resistance and even ripening, excellent harvest properties for farmers.
- ✓ Stable and high yield potential.
- ✓ Mid-early maturity, suitable for northern and eastern European latitudes.
- ✓ Broad adaption potential with lower TGW.

Classification based on German Federal Plant Variety Office 2024 and own observations.

## OSTINATO – Broad adaptation with high yield potential.

OSTINATO combines yield stability in grain and protein with a high lodging resistance and therefore very good threshing properties. With its broad adaptation potential, OSTINATO is suitable for all soil types of spring pea cultivation.
